Orca | KB2 Unit SPECIFICATION SHEET

Number of silver pods	1
Number of copper pods	5
Pipe size	1.5 inch
Water Pressure	9 bar (can be tested higher)
Width	1500mm
Width Height	1500mm 1388mm

Features

Touchscreen	\checkmark	Making the system very user-friendly
Anti – scaling technology	S	Proprietary software that reduces scale build up on the electrode surface
Customizable pod spacing for differing water qualities	e	3D printed pod inserts allow for pods to be physically customised according to water quality.
BMS compatible	\checkmark	Modbus BMS
Auto adjusting pods	e	Proprietary software adjusts electrode current according to various factors including the wear of the electrodes.
Ongoing microbiological and engineering support	\diamond	Headed up by Dr Birgitta Bedford, the ProEconomy client relations team monitor all systems and results, attend water safety groups and offer advice and guidance.
Bleed values for system sampling	e	Post electrode bleed valve for sample analysis.
Silver electrodes	99% pure	
Copper electrodes	99% pure	
Proportional ionisation	\checkmark	Ionisation is proportional to flow
High quality WRAS approved flow meter	~	Accurate flow meter is crucial to operation
Bypass valves for system maintenance	~	Allows the system to be bypassed for easy maintenance.
Pressure tested	~	Independently pressure tested at 9 bar before the system is shipped.
240 Volt standard spur	~	
Internet connection	Ethernet, Wifl, LAN	Numerous connectivity options.
Pressure drop across the system	None	

OFCA | KB2 Unit SPECIFICATION SHEET

Features continued...

Results analysed by independent UKAS approved laboratory	~	All results are analysed by an external independent UKAS approved laboratory
Self-diagnostic fault detection	S	If a problem is detected the system will either try and clear it or, if it can't, will shut down and transmit an error message.
Low-flow software	>	Low water flow rates can increase the rate of scaling to very high levels. Software developed by and unique to ProEconomy counteracts this very effectively.
Multiple ionisation legs.	~	On bigger systems - if one pod fails the others are programmed to take up the load.
Overload detection and safe mode operation.	~	If the system runs at over 90% of its full capacity for more than an hour it reduces down to 10% for the next hour, preventing overheating.
Pod Cartridges cleanable on site.	>	The electrodes within the pods can be easily removed for cleaning and changing. ProEconomy are the only company that offers this functionality.
5 Year Warranty	~	5 year warranty includes all parts and repairs. See terms and conditions.

Tetras

Online monitoring of water quality results	\checkmark	Login and monitor water sample results from the Tetras portal
Online trending of water quality results	\checkmark	Trend and filter water quality results over time via the Tetras portal
Online monitoring of pod usage	\checkmark	Chart electrode usage via the Tetras portal
Downloadable results within excel workbook	>	Export water quality data
Online system servicing log book	S	Available via the Tetras portal
Online monitoring of sample usage	>	Available via the Tetras portal
Online feedback and communication system	>	Available via the Tetras portal
Online system maintenance scheduling	~	Available via the Tetras portal
Online real-time operational coverage	~	Available via the Tetras portal
Online ability to change system settings	>	Available via the Tetras portal
Online monitoring of system metrics	~	Available via the Tetras portal. This includes water usage, system errors and system run time.
Secured desktop with password protected login	~	Tetras is designed with security in mind

"Since installation of the Orca system we have effectively eradicated Legionella."

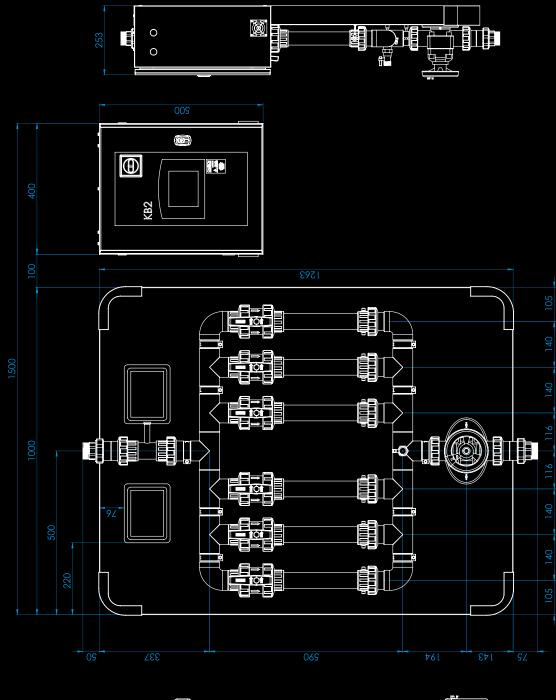

Kidderminster Hospital

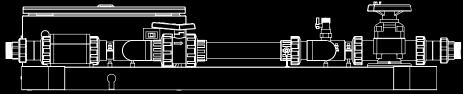

"It's the first time, after 20 years in estates, I've come across a system that's so effective in managing your water system. It's a blessing"

Head of Operational Estates at Churchill Hospital
